                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention relates to a novel expression cassette and methods for high yield production of polypeptides. The cassette comprises an operably linked nucleic acid sequence, where the expression of the cassette produces a tandem polypeptide that forms an inclusion body when expressed
                                                                                                                                                                                    The invention relates to a novel process for preparing recombinant human parathyroxin 1-34 peptide, including such steps as culturing a host cell in proper conditions, separating Gly-Ser-Pro-TPH 1-34 peptide (ADWH4376) sevaring by Pro endopeptidase to form PTH 1-34 peptide (ADWH4378) and separating and purifying PTH 1-34 peptide. The present sequence encodes the Gly-Ser-Pro-PTH 1-34 peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2 cugurucceaaauccagcugaugcacguggugguggugguggucugaacuccauggaacgug 61

                                                                                                                                                                                                                                                                                                                                                                                                                                  61
in a cell. The expression cassette is useful for producing peptide and polypeptide in a cell, preferably a tandem polypeptide that forms an inclusion body when expressed in a cell. The present sequence is that of a DNA sequence which encodes a PTH peptide which was used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61

The complete construct can be expressed in B. coli transformants. The intraconnecting peptide and C-terminal Cys residue enable the recombinant protein construct to be selectively reacted to produce C-terminal carboxamidated PTH(1-34)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Production of C-terminal alpha-carboxamidated peptide(8) - by cleavage and transpeptidation of recombinant multicopy peptide(8) or fusion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2 cugurucceaaauccagcugaugcacggugguggugguggucugaacuccauggaacgug

The invention comprises an expression cassette which produces a tandem polypeptide that form an inclusion body when expressed in a cell. The expression cassette of the invention is useful for producing a peptide or polypeptide in a cell, preferably a tandem polypeptide that forms an inclusion body when expressed in a cell. The present DNA sequence encodes a protein which may be used in the construction of a tandem polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CUGUTUCCGAAAUCCAGCUGAUGCACGGUGGUGGUGGUGGUGGUCUGAACUCCAUGGAACGUG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New expression cassette comprising an operably linked nucleic acid sequence, useful for producing a tandem polypeptide that forms an inclusion body when expressed in a cell.

                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to a novel expression cassette and methods for high yield production of polypeptides. The cassette comprises an operably linked nucleic acid sequence, where the expression of the cassette produces a tandem polypeptide that forms an inclusion body when expressed in a cell. The expression cassette is useful for producing peptide and polypeptide in a cell, preferably a tandem polypeptide that forms an inclusion body when expressed in a cell. The present sequence is that of a DNA sequence which encodes a polypeptide which may be produced using the expression cassette of the invention.
                                                                                                                    61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2 CUGUIUCCGAAAUCCAGCUGAUGCACGGUGGUGGUGGUGGUCGUGAACUCCAUGGAACGUG 61

The invention comprises an expression cassette which produces a tandem polypeptide that form an inclusion body when expressed in a cell. The expression cassette of the invention is useful for producing a peptide or polypeptide in a cell, preferably a tandem polypeptide that forms an inclusion body when expressed in a cell. The present DNA sequence represents an expression cassette which encodes a tandem polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                            New expression cassette comprising an operably linked nucleic acid sequence, useful for producing a tandem polypeptide that forms an inclusion body when expressed in a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TTTTT-3'], double-stranded cDNA was size selected, ligated to Eco RI adapters (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of a modified pT7T3 vector (Pharmacia). Library went through one round of normalization to a Cot = 5. Library constructed by Bento Soares and M.Fatina Bonaldo. RNA from sporadic parathyroid adenomas was kindly provided by Dr. Stephen Marx, National Institute of Diabetes and Digestive and Kidney Diseases, NIH."

Library went through one round of normalization to a Cot = 5. Library constructed by Bento Soares and M.Fatima Bonaldo. RNA from sporadic parathyroid adenomas was kindly provided by Dr. Stephen Marx, National Institute of Diabetes and Digestive and Kidney Diseases,

                                                                                                                                                  TTTTT-3'), double-stranded cDNA was size selected, ligated to Eco RI adapters (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of a modified pTT3 vector (Pharmacia). Library went through one round of normalization to a Cot = 5. Library constructed by Bento soares and M.Fatima Bonaldo. RNA from sporadic parathyroid adenomas was kindly provided by Dr. Stephen Marx, National Institute of Diabetes and Digestive and Kidney Diseases, NIH."

Library went through one round of normalization to a Cot = 5. Library constructed by Bento Soares and M.Fatima Bonaldo. RNA from sporadic parathyroid adenomas was kindly provided by Dr. Stephen Marx, National Institute of Diabetes and Digestive and Kidney Diseases,

                                                                                                                                                                                                                                                                                                                                                                 TTTTT-3'], double-stranded cDNA was size selected, ligated to Eco RI adapters (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sitee of a modified pT7T3 vector (Pharmacia). Library went through one round of normalization to a Cot = 5. Library constructed by Bento Soares and M.Fatima Bonaldo. RNA from sporadic parathyroid adenomas was kindly provided by Dr. Stephen Marx, National Institute of Diabetes and Digestive and Kidney Diseases, NIH."
